PROJECT SCOPE

Township Road “20b” from U.S. 6 to Road U is an existing 18’ wide pavement in which the section from U.S. 6 North 1,400’ will be planed ¾” (average) and resurfaced with 448 Asphalt Concrete (1¼” average depth). From this point North 5,480’ to Road U, the existing roadway will be pulverized for full depth reclamation and resurfaced with 448 Asphalt Concrete (1½” average depth). Aggregate berm will be placed 36” wide on each side as designated.

SPECIFICATIONS

The Standard Specifications of the State of Ohio Department of Transportation dated January 1, 2008 together with any modifications to same as stated in this proposal shall govern these improvements.

The 448 surface asphalt shall be Type 1M, PG 64-22. All 448 material shall be placed at full width.

“Formed or Butt-Type” construction joints shall be constructed at all pavement termini unless otherwise directed by the Township Trustees.

All aggregates used shall be quarry run aggregate from an O.D.O.T. approved source. The course aggregates used in the asphalt mixes shall be from crushed stone or gravel. The fine aggregates used in the mix designs shall be of natural sand or sand manufactured from stone or gravel. There shall be **NO** slag materials allowed in any mix design.

Unless otherwise directed, construct an apron one (1’) foot wide at unpaved driveways and mailbox approaches.

SPECIFIC PROJECT NOTES

FULL DEPTH RECLAMATION

1. Description

This work shall consist of pulverizing and mixing the existing bituminous surface along with the underlying granular base material to the specified length, width, and depth. Once pulverized the reclaimed materials shall then be used to establish proper width, grade and cross-slope. Once the above criteria are met, said materials shall then be mixed and stabilized with an asphalt emulsion, as specified. The material shall then be placed, compacted and fog-sealed as shown on the plans and as provided herein to create an “In-Place” Stabilized Base Course (SBC).

In the event that sub-standard material, high fines content or excessive moisture is present in isolated areas after the first pulverization pass, a small percentage of cement may be required to condition and/or dry the recycled material. Said cement shall be uniformly dispersed throughout the base material by using the reclaimer to mix the materials in the affected

areas. Any additional labor and/or equipment costs associated with the addition of this cement shall be included in the contingency cement pay item.

2. Materials

A. BITUMINOUS STABILIZING ADDITIVE

Asphalt emulsion used for the project shall be an anionic-type “High Float” Cold In-Place Recycling Emulsion (HF-RE). The quality of asphalt emulsion required per square yard for the project specified herein has been established by the project’s mix design.

The General Specifications are as follows:

B. PULVERIZED BASE MATERIAL

The pulverized asphalt/base material in the roadway shall meet the following gradation requirements:

Sieve Size	% Passing
2"	100
#4	30-65
#200	0-10

C. CHEMICAL ADMIXTURES

Portland cement additives shall meet the requirements of ODOT Item 701.01. The weight of cement used shall be per the mix design.

D. WATER

In the event that water is needed for dust control and/or aid in compaction. It shall be clean and clear. If the water is of questionable quality, it should be tested in accordance with the requirements of AASHTO T-26.

3. Construction

A. GENERAL

The contractor shall provide all necessary labor, equipment, aggregate, stabilizing additives, if required, and place and compact the Stabilized Base Course.

B. EQUIPMENT/PROCESS

i. PREPULVERIZATION / SHAPING

The contractor shall pre-pulverize all pavement materials within the roadway limits to the depth specified (not to cut into sub-grade), shape said pulverized materials within the roadway limits to the depth specified, shape said pulverized materials to within ½ inch of irregularity to the lines and grades of the proposed roadway and compact pulverized material until no further densification is achieved. After acceptance by the Engineer, the contractor shall commence with spreading and blending. Water may need to be injected if pulverized materials are below 85% of optimum.

The equipment for pulverizing and mixing the existing pavement surfaces shall be a self-propelled machine capable of pulverizing in-place the existing pavement at a minimum width of eight (8) feet at the specified minimum depth. The cutting drum shall have the ability to operate at various speeds (RPM), independent of the machine's forward speed, with an adjustable mechanism to control chunk size and gradation. The machine shall be equipped with a computerized integral liquid proportioning system capable of regulating and monitoring the liquid application rate relative to depth of cut, width of injection, advance speed, and material density. The spray bar shall be mounted in such a manner as to allow the liquid additive(s) to be injected directly into the cutting drum/mixing chamber area of pulverized material in suspension. The equipment shall be capable of mixing the liquid additive(s) and the pulverized material into a homogenous mixture. The cutting drum shall be fully maintained and in good condition at all times throughout the job.

ii. DRY ADDITIVE SPREADING

The additive shall be applied at the rate set as indicated by the Job Mix Formula. The additive shall be spread uniformly on the soil by using computer controlled volumetric screw/vane type feeder or similar equipment approved by the Engineer. Dry additives shall be spread in a manner to minimize dusting. Skirting shall be provided on the spreader discharge and extend to sub-grade. Water spray shall be available at the spreader discharge. The dry additive shall not be applied when wind conditions, in the opinion of the Engineer, are such that blowing additive becomes objectionable to traffic or adjacent property owners.

iii. PULVERIZATION/MIXING

Using reclaiming equipment described in (A) above; thoroughly mix the dry materials while injecting the liquid additives as required to create a homogenized mix.

iv. RECLAIMED BASE COURSE PLACEMENT/GRADING

Following mixing, the SBC shall be placed by means of a conventional motor grader or paving machine with slope control, to the lines and grades established in the plans or proposal. Paving of this type is expected to be in accordance with acceptable base course products, with a tolerance of not more than ½ inch of irregularity.

v. COMPACTION

The number, weight and type of rollers shall be sufficient to obtain the required compaction while the SBC is in a workable condition. When Full Depth Reclamation is utilized at depth of 4” or more, breakdown rolling shall take place prior to motor grader manipulation utilizing at least a 30-ton pneumatic roller equipped with a wheel wetting device or an 84” vibratory pad foot roller. Rolling shall be performed until no displacement is discerned. Either a 20-ton double-drum vibratory steel wheel roller with a drum wetting device or an 84” single drum smooth drum vibratory compactor shall do final rolling to eliminate pneumatic tire marks and achieve density. Rolling/compacting patterns shall be established so that starting and stopping on un-compacted reclaimed material is kept to a minimum or eliminated, if possible. Starting and stopping should be done on previously compacted reclaimed material or on the existing pavement. Any type of rolling that result in cracking, movement, or other types of pavement distress shall be discontinued until the problem can be resolved. Discontinuation and commencement of rolling operations shall be at the sole discretion of the Engineer.

vi. WEATHER LIMITATIONS

No work shall be performed before May 1st or after October 31st unless otherwise directed by the Engineer. The weather and temperature limitations for this work shall be 50° F and rising with no standing water on the existing surface. No work shall be performed if there is a forecast of an atmospheric temperature below 32° F within 24 hours.

4. CURING

Traffic may be allowed on the SBC before the new asphalt section is placed, however, it is at the discretion of the Engineer. Allow the reclaimed base course to cure for at least 3 days after proper compaction or until the moisture content of the SBC layer is acceptable before placement of the new asphalt wearing course.

5. SURFACE SEALING (FOG SEALING)

The reclaimed base course may need to be sealed at a rate of approximately 0.25 gallons/S.Y. to prevent raveling. After applying the emulsion for fog seal, sand or grits shall be spread

over the surface at a rate of 15 pounds/S.Y. to prevent tracking of bituminous material. The product to be used for this sealing shall be compatible with any stabilizers specified for the SBC.

6. MIX DESIGN

The following Job Mix Formula is based on an existing in-place asphalt/base material that was retrieved from various cores taken. The results of the cores were as follows: ~11” of a combination of bituminous mixtures, and a minimum of 8” of aggregate base on the west 15 feet of roadway. On the eastern 3 feet of the roadway, the results of the cores indicated a minimum of 8” of a combination of bituminous mixtures, and a minimum of 6” of aggregate base. Quantities below are based on a pulverized material density of 134.5 lb./c.f. The pulverization pass (Pass #1) is to be done at a depth of 11” below the existing pavement grade on the western 13 feet and at a depth of 8” below existing pavement grade on the eastern 6 feet. Following the initial shaping and compaction operation, the depth of cut into the resulting pulverized asphalt/base roadway for the stabilization pass (Pass #2) will be 10” inches on the western 13 feet and 7 feet on the eastern 6 feet. The materials to be added are as follows:

HFRE Emulsion Application Rate	1.2 Gallons/S.Y.
Portland Cement Application Rate	18.2 Lbs/S.Y.
Material Density for Calculation of Portland Cement	
	134.5 Lbs./C.F.

Combine the pulverized material, emulsion, and cement, meeting the requirements specified, in such proportions that the base course composition conforms to the Job Mix Formula accepted by the Engineer. Make field adjustments to the mix proportions under the guidance of the Engineer to obtain a satisfactory RBC.

MAINTENANCE AND GUARANTEE PERIOD

The CONTRACTOR shall be responsible for all construction for one (1) year after project completion and acceptance. The CONTRACTOR shall make corrections as necessary by reason of noted defects. The Trustees will give notice of observed defects with reasonable promptness. In the event that the CONTRACTOR fails to make repairs, adjustments or complete other work which may be required by such defects, the Trustees may do so and charge the CONTRACTOR the costs incurred.

TESTING - "Unless otherwise designated, tests required on materials and products in accordance with AASHTO, ASTM or methods on file in the office of the Director will be made by and at the expense of the CONTRACTOR".

MAINTAINING TRAFFIC - Local traffic only shall be maintained for access to and from home sites. Lights, signs and barricades shall be provided by the CONTRACTOR and placed in accordance with the Ohio Manual of Uniform Traffic Control Devices. Maintaining traffic in accordance with the above provisions shall be included for payment in the lump sum for

Item 614, Maintaining Traffic.

Temporary pavement markings shall be placed upon the centerline of the surface at approximately 50 foot intervals. The temporary pavement marking shall be paid for under Item 448.

UNDERGROUND UTILITIES - Prior to any construction requiring excavation activity, the CONTRACTOR shall contact the Ohio Utility Protection Service (OUPS) at 1-800-362-2764 for location of any underground utilities at least two (2) working days prior to any activity. Non-OUPS members must be called directly.

NOTICE TO TOWNSHIP

The CONTRACTOR shall provide the Township with a minimum of 48 hours advance notice prior to the commencement of any work.

AWARD OF PROJECT

The bid may be tabled at the formal opening; award of the project will be made at the time designated by the Board of Township Trustees following a review to verify bid compliance with all requirements and following the finalizing of the funding agreement between the Ridgeville Township Trustees and the Ohio Public Works Commission.

PROJECT COMPLETION DATE

The project shall be completed on or before September 15, 2009.

For each calendar day that any work shall remain uncompleted after the stated completion date the appropriate sum, in accordance with the schedule of liquidated damages per Section 108.07 of the Standard Specifications of the State of Ohio Department of Transportation, will be deducted from any monies due the CONTRACTOR, not as a penalty but as liquidated damages; provided however, that due account shall be taken of any adjustment of the completion date granted by the Board of Trustees of Ridgeville Township.

Once a roadway is closed for commencement of the project, the CONTRACTOR shall proceed without undue delay to complete the project in a timely manner and avoid prolonged interruption of traffic on the roadway. Delays in the work following an initial start which are not attributable to weather or seasonal conditions shall be considered days beyond completion and the CONTRACTOR will have deducted from any monies due him according to the schedule of liquidated damages per Section 108.07 of the Standard Specifications of the State of Ohio Department of Transportation.

A work day will be counted as lost if the CONTRACTOR'S efficiency is reduced more than fifty (50%) percent on the critical items under construction at that time. Weekends and holidays will not be counted as lost work days.

PREPARATION OF PROPOSAL

The blank spaces in the proposal must be filled in correctly, where indicated, and written in ink.

BID PROPER

The bidder is required to fill in, in the "Unit Price Bid" column, a unit price for addition opposite each item for which there is a quantity given in the "Approximate Unit Quantities" column. The gross sum of the totals in the "Total Amount Bid" column shall equal the sum (shown on Page 15 of this proposal) for the work.

The total given on Page 14 is only for the convenience of the Ridgeville Township Trustees in reading bids.

The unit prices specified in the "Unit Price Bid" column will govern the award of the Contract. The unit prices bid shall remain in effect and held firm during the term of the Contract. ODOT Item 401.20 Asphalt Binder price adjustment does not apply.

The CONTRACTOR shall make extensions in the "Total Amount Bid" column and also add up the totals. However, the unit prices specified, together with the approximate quantities shall determine the total amount of the bid. If there is an error made in the extensions by the Bidder, the total shall be changed as only the unit prices shall govern.

The quantities in the "Approximate Unit Quantities" column are those given in the Engineer's approximate estimate and are those which will be used in determining the total amount of each proposal for this improvement and for the purpose of determining the lowest bidder. It is understood that these quantities are approximate only. The bidder must give a unit price for each item listed. Failure to do so will render the bid informal at the discretion of the Ridgeville Township Trustees.

BID GUARANTEE

Payable to the Board of Trustees of Ridgeville Township.

Each bidder is required to file with his bid a bid guarantee in the form of either:
